

Project Design Phase-I Solution Architecture

Date	07 October 2022
Team ID	PNT2022TMID02873
Project Name	Smartfarmer - IoT Enabled Smart Farming Application
Maximum Marks	4 Marks

Solution Architecture Diagram:

IoT Device:

- Anything that has a sensor attached to it and can transmit data from one object to another or to people with the help of internet is known as an IoT device.
- The IoT devices include wireless sensors, software, actuators, computer devices and more.

IBM Watson IoT Platform:

- Completely manage your IoT landscape and make better business decisions.

- Using a secure, smart and scalable platform as the hub of your IoT, get real-time analysis of user, machine and system-generated data, including speech, text video and social sentiment.
- You need contextual insight for truly cognitive IoT applications.

Node-Red:

- Node-RED is a programming tool for wiring together hardware devices, APIs and online services in new and interesting ways.
- It provides a browser-based editor that makes it easy to wire together flows using the wide range of nodes in the palette that can be deployed to its runtime in a single-click.

MIT App:

- MIT App Inventor is an online platform designed to teach computational thinking concepts through development of mobile applications.
- Students create applications by dragging and dropping components into a design view and using a visual blocks language to program application behavior.

Web UI:

- The WebUI is a streamlined Web-based application with a user-friendly interface that allows you to easily manage the NetScreen appliance.

User:

- A user is any individual who is not involved with supporting or developing a computer or service.
